

Why make an R package (in biology)

They help you share your code

They help increase your code's visibility and adoption

They save you (and others) time

They inspire confidence in you (and you)

Why make an R package (in biology)

They help you share your code

They help increase your code's visibility and adoption

They inspire confidence in your code (and you)

They save you (and others) time

R has several repositories for packages
