

Lessons from our efforts are

Most 'specific' marketing aren't, at least at whole animal scale.

Assuming a 1-to-1 correspondence between types and clusters is problematic.

Training good classifier is fairly easy. Specifying class is hard.

Lessons from our efforts to annotate cells

Assuming a 1-to-1 correspondence between cell types and clusters is problematic.

Training a good classifier is fairly easy. Specifying cell types is hard.

Most “specific” marker genes aren’t, at least at whole animal scale.
