

Let's use Git on the cluster

First, you need to generate an ssh key:

```
$ ssh-keygen -t rsa -b 4096 -C "your_email@example.com"
```

```
> Generating public/private rsa key pair.
```

```
> Enter passphrase (empty for no passphrase): [Just hit enter]
```

```
> Enter same passphrase again: [Just hit enter again]
```

```
$ cat ~/.ssh/id_rsa.pub
```

Copy that whole block of text (not the command prompt) into the clipboard

Add your ssh key to GitHub

(follow the instructions I am about to slack you)

<https://help.github.com/en/github/authenticating-to-github/adding-a-new-ssh-key-to-your-github-account>
