

Problem: select fields from each record in a file

Solution: `cut -f <list of columns> input.tsv`

You can also cut out ranges of columns, or specific characters instead of columns.

You can change the character that delimits columns (`-d`). Default is tab (`'\t'`).

Problem: select fields from each record in a file

```
join -1 3 -2 3 jedi_example2.txt jedi_example3.txt | cut -f 2,3,1,4,7 -d ' '
```
