

Common table operations during exploration

Pick observations by their values

Pick observations by their values

Reorder the rows

Pick observations by their values

Reorder the rows

Pick *variables* by their names

Pick observations by their values

Reorder the rows

Pick variables by their names

Create new variables with functions of existing variables

Pick observations by their values

Reorder the rows

Pick variables by their names

Create new variables with functions of existing variables

Collapse many values down to a single summary

Common table operations during exploration

Pick observations by their values

Reorder the rows

Pick variables by their names

Create new variables with functions of existing variables

Collapse many values down to a single summary

Problem: Transform your data during exploration

Solution: dplyr: a grammar of data manipulation
