

Problem: edit strings

Solution: `sed 's/<regex 1>/<regex 2>/' file`

Sample problem 2

Download “grep_sed_example1.txt”

Change instances of A549 to MCF7

Change only the second instance of A549 to A549_LUNG

Change instances of A549 to MCF7, but without stating "A549" (i.e. use regex)

How do we make all these changes at the same time?
