

tibbles

Problem: Store a table and provide some read/write operations

Solution: tibble: just like an R data frame, but better

```
tibble(  
  x = 1:5,  
  y = 1,  
  z = x ^ 2 + y  
)
```

```
#> # A tibble: 5 x 3  
#>       x     y     z  
#>   <int> <dbl> <dbl>  
#> 1     1     1     2  
#> 2     2     1     5  
#> 3     3     1    10  
#> 4     4     1    17  
#> 5     5     1    26
```
