

# Sample problem 3

Use join to make a single file from exampleR1.nl.tsv and exampleR2.nl.tsv that has three columns: read name and the two lengths.

```
join -1 1 -2 1 exampleR1.nl.tsv exampleR2.nl.tsv
```

Use awk to compute the sum of the two read lengths

```
join -1 1 -2 1 exampleR1.nl.tsv exampleR2.nl.tsv | awk '{print $2 + $3}'
```

# THE END

For now
