```
$ cd hello-world-<your_gihub_id>
$ git stage README.md
$ git commit -m "Added my first checkin"
$ git push origin
```

Push changes to "hello world"

```
$ cd hello-world-<your_gihub_id>
$ git stage README.md
$ git commit -m "Added my first checkin"
$ git push origin
```

Note that you may find it easier to edit and commit on your local machine, and then *pull* your changes on the cluster to synch.

THE END

For now
