select() picks variables by their names

```
# Select columns by name
select(flights, year, month, day)
#> # A tibble: 336,776 x 3
#>     year month   day
#>    <int> <int> <int>
#> 1   2013     1     1
#> 2   2013     1     1
#> 3   2013     1     1
#> 4   2013     1     1
#> 5   2013     1     1
#> 6   2013     1     1
#> # … with 3.368e+05 more rows
```

select`()` picks variables by their names

```r
# Select all columns between year and day (inclusive)
select(flights, year:day)
#> # A tibble: 336,776 x 3
#>     year month   day
#>    <int> <int> <int>
#> 1   2013     1     1
#> 2   2013     1     1
#> 3   2013     1     1
#> 4   2013     1     1
#> 5   2013     1     1
#> 6   2013     1     1
#> # … with 3.368e+05 more rows
```
